*"I have never played a game as colorful, hilarious and addicting as Commander Keen. I hope you make more Keen adventures before I go stir crazy!"*

— John H., Reno, NV

Until now, no game ever made for the IBM PC has had the colorful, 360° scrolling, high-speed animation as seen in *Commander Keen*.

*Commander Keen* is a major breakthrough with ultra high-speed EGA/VGA graphics. Keen's graphics and animation are so amazing that officials from several commercial publishers have contacted Apogee Software to buy our proprietary animation routines.

The animation and scrolling is updated at nearly 40 frames per second and, for comparison, motion picture quality cartoons are filmed at only 24 frames per second.

The story of *Commander Keen* is epic, and in the style of matinee serials, like *Flash Gordon* and *The Rocketeer*.

*Commander Keen* consists of three unique games, each a vital chapter in the entire trilogy. And each volume boasts **completely** redesigned graphics and new locations. The three volumes are: "Marooned on Mars", "The Earth Explodes", and "Keen Must Die!"

Keen's first adventure takes you to Mars, where the Vorticon invasion force is planning their conquest of Earth. While Keen is exploring Mars the Vorticons steal pieces of his ship and hide them within their vast cities.

Can Keen recover all the pieces and repel the Vorticon invasion? You'll explore many cities and other locations, each packed with diabolical traps and hideous creatures, both of Martian and Vorticon origin. Use your pogo stick to reach high ledges and jump deadly pits, and use your ray gun to stun the Vorticon invaders. Can you find the secret city?

*Commander Keen* requires 525k RAM, and an EGA or a VGA system, and a joystick is optional. Keen is a very easy game to learn, without a lengthy manual to read before playing.

*Commander Keen* will also be available as a Nintendo cartridge, being released soon by a major American Nintendo publishing company.
